SUMMARY

Full-Stack Developer with a strong foundation in Java (Spring Boot) and the MERN stack, and growing expertise in Python based AI and automation systems. Experienced in delivering end to end solutions, from designing responsive React frontends to implementing robust backend logic, secure authentication and machine learning driven features such as lead scoring and natural language processing. Skilled at translating complex requirements into reliable software through clean code, effective problem solving and a focus on modern, scalable system design.

WORK EXPERIENCE

Full-Stack Developer Intern - **Decimal Solutions** **July 2025 – September 2025**

- Built and deployed full-stack web applications using the MERN stack, focusing on scalable system architecture and clean code.
- Designed RESTful APIs and integrated them with responsive React frontends to ensure smooth data flow and system performance.
- Ran real-time debugging and managed professional version control workflows under senior mentorship to deliver reliable software.
- Worked on end-to-end development tasks, prioritizing long-term maintainability and performance optimization for every project.

SKILLS

- Languages: Java, Python, JavaScript, TypeScript, HTML, CSS
- Libraries & Frameworks: Spring Boot, Node.js, Express.js, React.js, Next.js, FastAPI, Celery, Scrapy, Playwright, BeautifulSoup
- Tools: Git, GitHub, Postman, Docker
- Databases: MySQL, PostgreSQL, MongoDB, Redis
- Platforms: IntelliJ IDEA, Visual Studio Code

PROJECTS

Learnova – Web Application

(Spring Boot, React, PostgreSQL, Docker, JWT/OAuth)

- Developed a scalable role-based LMS with secure JWT/OAuth authentication and real-time chat functionality.
- Engineered a layered backend architecture using DTOs and Service patterns to handle automated grading, course management and performance analytics.
- Built a responsive frontend using React and Tailwind CSS, integrating RESTful APIs for dynamic course enrollment and interactive time-based quizzes.
- Deployed the system using Docker, Vercel and Render, ensuring a production-ready environment with secure configuration management.

LEADS – AI Powered Real Estate Intelligence Platform (Ongoing)

(Python, FastAPI, Next.js, PostgreSQL, Celery, Redis, Scrapy, Playwright, scikit-learn, Hugging Face Transformers, WhatsApp Cloud API)

A real estate intelligence platform for the Pakistani market that replaces manual property search and outreach with an automated pipeline: it scrapes and analyzes live listings across four platforms, scores and ranks leads with a trained machine learning model, and handles seller outreach through WhatsApp automation, all with human approval at every step.

- Designed a multi agent scraping system running parallel workers across four platforms simultaneously, each on a dedicated proxy, cutting a task that previously took hours of manual search down to minutes.
- Built a market intelligence engine that analyzes listing velocity, time on market and price trends to generate live investment recommendations using large language models.
- Trained a lead scoring classifier with scikit-learn and an NLP model with Hugging Face Transformers to automatically rank leads and detect buyer intent from WhatsApp replies.
- Designed the system architecture end to end across a dual database setup with PostgreSQL and MongoDB, containerized with Docker, working as one of two engineers building out the platform's twelve module pipeline.

Swaari – Web Application

(Node.js, Express.js, React.js, MongoDB, JWT, Socket.IO, Maps API)

- Built a full-stack ride-hailing application with separate modules for Riders and Drivers, covering the complete trip lifecycle from booking to completion.
- Integrated Google Maps API for real-time location tracking, route plotting, and calculating distances for fare estimation.
- Created a live driver-matching system using WebSockets (Socket.IO) to handle real-time ride requests, status updates, and live ETA tracking.
- Implemented secure user authentication and role-based access control to manage different permissions for riders and drivers across the platform.
- Designed a responsive React frontend with a clean UI for interactive maps and a streamlined booking process for mobile and web users.
- Developed scalable backend logic to manage geolocation data, trip history, and nearest-driver allocation to ensure efficient system performance.

EDUCATION

Bachelor of Science in Software Engineering

September 2023 – June 2027

COMSATS University Islamabad
